Patent No. 655195

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND ANINO ACID SEQUENCES RELATING TO PSEUDOMONAS:
TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFRERENCE: 107196.136
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Rank, David R.
APPLICANT: Rank, David R.
APPLICANT: Chen, Wensheng
TITLE OF INVENTION: GENE EXPRESSION ANALYSIS BY MICROARRAY
FILE REFERENCE: Acomica-X-1
CURRENT APPLICATION NUMBER: US/09/864,761
CURRENT FILING DATE: 2001-05-23

PRIOR APPLICATION NUMBER: US 60/180,312
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 N: EXPRESSED IN BT474, SIGNAL = 2.2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 3, Application US/10504364

Sequence 3, Application US/10504364

Publication No. US2050287158A1

GENERAL INFORMATION:

APPLICANT: Georgetown University

APPLICANT: Georgetown University

TITLE OF INVENTION: The p65 subunit of NF-kB for the radiosensitization of cells

FILE REFRENCE: 082137-0310990

CURRENT FILING DATE: 2004-08-12

PRIOR APPLICATION NUMBER: US/10/504,364

CURRENT FILING DATE: 2003-02-19

PRIOR APPLICATION NUMBER: US 60/356,748

PRIOR APPLICATION NUMBER: US 60/356,748

PRIOR FILING DATE: 2002-02-15

NUMBER OF SEQ ID NOS: 12

F; 518-525/Region: nucleotide-binding motif A (P-loop)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Variantional endoplasmic reticulum ATPase - pig

Variantional endoplasmic reticulum ATPase - pig

NiAlternate names: CDC48 homolog; TER ATPase; valosin-containing protein

NiContains: ATPase (EC 3.6.1.)

C;Species: Sus serofa domestica (domestic pig)

C;Date: 13-Aug-1986 #sequence_revision 16-Feb-1996 #text_change 19-Jan-2001

C;Accession: A26360; A01627

R;Barber, M.J.; van Valkenburgh, H.; Trimboli, A.J.; Pollock, V.V.; Neame, P.J.; Bastian Arch. Biochem. Biophys. 320, 266-275, 1995
A;Title: The amino acid sequence of Rhodobacter sphaeroides dimethyl sulfoxide reductase A;Reference number: S66255; MUID:95351787; PMID:7625833
A;Reference number: S66255
A;Retus: preliminary
A;Molecule type: protein
A;Residues: 43-67;806-813, F',815-816, P',818 < BAR>
A;Cross-references: UNIPARC:UPI0000178ABF; UNIPARC:UPI0000178AC0
A;Residues: 52-158, R',160-184, V',186-191, G',193-198, Y',200-370, MAQ',374-421, A',423
A;Residues: S1-158, R',160-184, VV',186-191, G',193-198, Y',200-370, MAQ',374-421, A',423
A;Cross-references: UNIPARC:UPI0000178ABF; UNIPARC:UPI0000178AC0; EMBL:U25037
A;Experimental source: strain IL 106
A;Note: the authors translated the codon NAT for residue 129 as Lys, GTC for residue 425

A;Description: catalyzes the reduction of many oxide compounds
A;Note: cofactor molybdenum; is synthesized inducibly in the presence of dimethyl sulfox
B;Superfamily: trimethylamine-Noxide reductase
C;Keywords: molybdenum; monomer; oxidoreductase; periplasmic space
F;1-42/Domain: signal sequence #status predicted <SIG;
F;43-822/Product: methionine-S-oxide reductase #status predicted <MAT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Topine-rich carboxyl-terminal domain in mammalian cells.";

J. Biol. Chem. 273:1044-1051(1998)

C. Probably by regulating membrane fission. Enzyme hydrolyzing GTP that oligomerizes to form ring-like structures and is able to remodel membranes. May also play a role on organelles of the cremodel membranes. May also play a role on organelles of the secretory pathway (By similarity) of P. Phosphate.

C. CAPALYTIC ACTIVITY: GTP + H(2)0 = GDP + phosphate.

SUBGNIT: Homotetramer; N-terminal part binds to the C-terminal part of another. DNMIL. Can Self-assemble in multimeric ring-like structures. Interacts with GSK3B and TTC11 (By similarity).

C. SUBCELLUAR LOCATION: Cytoplasmic; mainly cytosolic. Also membrane associated. Localizes to mitcohondria at spotes of division events. Associated with peroxisomal-membranes it is recruited in part by PEXIIB. May also be associated with endoplasmic resiculum tubules and cytoplasmic vesicles and found to be perinuclear (By similarity).

ALTERNATIVE PRODUCTS:
 This Swiss-Prot entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. There are no restrictions on its use as long as its content is in no way modified and this statement is not
 TISSUE SPECIFICATY: Expressed in the cereballum and in several regions of the cerebral and in several regions of the cerebral and in the cereballum and in several the cereballar serving cells and in the pointile giant neurons. PTM: Phosphorylated by GSK3B (By similarity).

SIMILARITY: Belongs to the dynamin family.

SIMILARITY: Contains 1 GED domain.

CAUTION: This is a conceptual translation (isoform 1).

This Swiss-Prot entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use as long as its content is in no way modified and this statement is not
 CATALYTIC ACTIVITY: GTP + H(2)O = GDP + phosphate.
CATALYTIC ACTIVITY: GTP + H(2)O = GDP + phosphate.
CATALYTIC ACTIVITY: GTP + H(2)O = GDP + phosphate.

CATALYTIC ACTIVITY: GTP + H(2)O = GDP + phosphate.

SUBUNIT: Homocterramer; N-terminal part binds to the C-terminal part of another DNMIL.

Can self-assemble in multimeric ring-like structures. Interacts with GSX3B and TTC11.

SUBCELLUTAR LOCATION: Cytoplasmic; mainly cytosolic. Also membrane-associated. Localizes to mitochondia at spots of division events. Associated with peroxisomal membranes it is recruited in part by PEXI1B. May also be associated with endoplasmic reticulum tubules and cytoplasmic vesicles and found to be perinuclear (By similarity).
 J. Biol. Chem. 278:8597-8605(2003).
